From: Tom Ward, Director

Handwritten initials "TW" in black ink, positioned to the right of the name of the sender.

Date: September 17, 2024

Re: Sandy Public Utilities Initial Service Line Inventory Presentation

---

The purpose of this presentation to the City Council is to give an update on Sandy City Public Utilities' efforts to comply with the requirements of the Lead and Copper Rule Revisions from the EPA and the Utah Division of Drinking Water concerning the water service line material inventory. As detailed in the attached letter from CRS Engineers, no lead service lines have been found in Sandy City during the inventory and inspection process.

Based on the number of random physical inspections, we are able to have a 95% level of statistical confidence that there are no lead service lines in Sandy's water system. This determination is in accordance with the Lead Service Line Inventory Guidance document provided by the Utah Division of Drinking Water.

We have prepared a public "dashboard" on the Sandy web site showing the results of the service line inventory that will be published by October 16 as required by the EPA and the Utah Division of Drinking Water.
