

MEDICALLY VULNERABLE PEOPLE PROGRAM ANNUAL REPORT

JANUARY 20, 2026

2025 PROGRAM OVERVIEW

Total People Served: 464

Average Age Served: 62

Youngest Age Served: 36

Oldest Age Served: 85

People Served Currently: 145

Outcomes: 57 individuals moved into permanent housing, skilled nursing facilities, or in with family/friends.

REFERRAL OVERVIEW

Throughout 2025, MVP had **1,085** referrals from **78** referral sources including **35 hospitals/medical providers, 22 homeless services providers, 8 community agencies and 13 City, County, & State agencies.**

2026 VISION

The Road Home, Fourth Street Clinic, & Shelter The Homeless remain committed to continual programmatic growth & improvement in 2026. To continue to address the critical needs of this vulnerable population, some key priorities include:

- **Continue identifying and addressing key barriers** faced by elderly community members facing homelessness across Salt Lake County, bringing together stakeholders across multiple sectors.
- **Build on established strategic partnerships** with long-term care facilities and senior housing providers to increase placements into housing and support services for older adults.
- **Explore additional on-site resources** to increase positive client health and housing outcomes through integrated care coordination and evidence-based interventions.

FOURTH STREET CLINIC

High Acuity Beds

- 138 patients served in high acuity beds
- 25% female, 75% male
- Common conditions include COPD (26%), hypertension (46%), diabetes (21%), chronic heart failure (31%), mental illness (77%), & substance use disorder (46%).
- 100% had multiple chronic conditions
 - 75% had 2-4 conditions
 - 25% had 5+ conditions
- 100% have a Kantz medical score of 6+. A Kantz score is a medical risk score based on number of chronic conditions, advance disease status, and current acute care needs.

Onsite services offered by Fourth Street Clinic include primary care, nursing visits, behavioral health services, medical case management, urgent medical assessments, care planning, transportation support, onsite specialty services, vaccinations, medication delivery, medication reconciliation, and transportation support. Of those who engaged with FSC services (N =418), the highest levels of engagement were with case management (92%), EMT services (70%), medical providers (51%), and behavioral health (39%). Of patients served, the youngest age was 37, the oldest age was 83, and the average age was 63. 1,512 transports were provided for 149 patients, ensuring access to critical healthcare appointments.

PROGRAM IMPACT

Alex came to MVP after leaving an unsafe situation, worried her past eviction—during a mental health crisis—would block her from housing. She had a strong record of stable rent and housing, had recently begun medication, and was focused on recovery, though housing still felt out of reach.

Through steady check-ins and trust-building, the MVP team helped her re-focus on housing. After her first application was denied, she was discouraged, but with continued support she recognized her strengths and learned to advocate for herself. She wrote a letter explaining her crisis, treatment, and steps toward stability.

Her denial was overturned, and she signed a lease on January 15th. She has worked hard to regain stability, and we're proud to have supported her.
